## History

On May 3 & 4, 1996, 240 students participated in the first state-based Rockets For Schools event. Students were addressed by NASA Administrator, Dan Goldin and astronaut Mark Lee. 12,000 people were in attendance as Sheboygan, Wisconsin became the first inland sub-orbital launch site. The rocket contained a payload that was constructed by a team of students and professors from the UW – Madison School of Engineering. Since that inaugural event we have had student teams from across the Mid-West.
